

ATTO and FlavourSys Solutions

ATTO ThunderLink™ Desklink Devices Fuel FlavourSys Strawberry Software

The FlavourSys Strawberry user interface provides a central spot for project management and sharing.

Solution Components

- ATTO ThunderLink FC 1082
- ATTO ThunderLink NS 1101 (SFP+)
- ATTO ThunderLink NT 1102 (10GBASE-T)
- ATTP FibreConnect FibreChannel Switch
- Strawberry 1U Server
- FC or NAS Storage

About ATTO Technology

ATTO Technology is a global leader of storage connectivity and infrastructure solutions for data-intensive computing environments. ATTO provides solutions that help customers store, manage and deliver data more efficiently. Visit www.attotech.com/solutions for more information.

ATTO's ThunderLink™ FC 1082, NS1101 and NT1102 Desklink devices have been qualified as compatible with FlavourSys Strawberry for Windows and Mac OS. With a portfolio encompassing Fibre Channel, 10GbE, SAS/SATA and SAS/SATA RAID, ATTO Desklink devices provide the widest range of options for connecting Thunderbolt-enabled all-in-ones and laptops to high-performance storage and networks. The compatible devices support up to 10Gb/s transfer rates and provide sufficient throughput to handle multiple uncompressed HD streams. They also incorporate proprietary ADS technology for predictable data transfer with managed latency.

FlavourSys Strawberry is a storage-agnostic collaboration and management tool for Avid™, Adobe Premiere™ and Final Cut Pro™ editing projects. It provides fast and secure project sharing and a unique user and team management solution that makes projects available only to those who require access. Strawberry's open architecture allows it to integrate not only in new, but existing SAN or NAS infrastructures. It is also easy to use, working in the background to take care of underlying storage tasks via a dynamic file system. FlavourSys makes Strawberry available as a 1U server for connection to third-party storage or as a storage appliance through its hardware partners DVS and Rorke Data.

Strawberry's storage-agnostic, open architecture made it a perfect fit for the National Geographic Channel when the network recently made a transition to using commodity storage for its Avid workflow. With crack support from the FlavourSys technical team, National Geographic was able to seamlessly implement the Strawberry software, and to benefit immediately from its advanced project management and sharing capabilities.
