

High-Availability Storage Connectivity for Mac & High-Performance RAID for Shared Storage

Demo Description

ATTO Products

Celerity FC-84EN 8-Gb Fibre Channel Host Adapter with Custom Multipathing Driver
ATTO Configuration Tool
FastStream SC 8500 8-Gb Fibre Channel-to-3-Gb SAS

High-Availability Storage Connectivity for Mac

- ATTO Celerity Fibre Channel Host Adapters with custom multipathing drivers provide high availability connectivity to storage for continuous uptime
- Load balancing allows you to aggregate performance across multiple ports
- Pool storage — share storage among all departments
- Scalability — add storage on a global scale
- Diagnostics — simple tools to find & resolve issues

In the event of a front-end path failure, or if a controller needs to be taken off-line for field service; the Celerity host adapter will route all traffic through the remaining path(s) for continued access to data. With the controller path back on-line, data will again be load balanced across all ports specified. This occurs without the need for user intervention.

High-Performance RAID for Shared Storage

- Maintain full stream count (even during drive failure and rebuilds) by adding FastStream SC 8500 with 8-Gb Fibre Channel connectivity to any standard SAS and SATA II JBOD storage while providing RAID protection
- FastStream allows one or multiple Fibre Channel-based workstations to access the RAID-protected low-cost, off-the-shelf storage in a networked SAN environment
- By aggregating SAS storage and providing RAID protection from a single appliance, users can have a low-cost, easy-to-manage storage infrastructure without the need to purchase expensive RAID arrays
- FastStream is JBOD, DVRAID™ and RAID 0, 1, 4, 5, 6, 10, 40, 50 and 60 configurable
