

ATTO has nearly 30 years of experience working with OEMs and systems integrators. ATTO also works closely with Original Design Manufacturers to create high-performance solutions that can now include Thunderbolt™ technology. For example, ATTO has partnered with design manufacturer CI Design® to create Thunderbolt storage enclosures that provide an all-in-one solution.

In 2015, more than 100 million Thunderbolt ports and platforms were available in the marketplace, a number that will only grow in 2016. The ThunderStream® fits well in a wide range of markets looking to take advantage of the increased bandwidth Thunderbolt allows. These markets include pro video/ CAD/CAM, graphic design and access to file shares for small and medium businesses. ATTO's ThunderStream has completed Thunderbolt certification for both Windows and Mac. In addition, it has undergone extensive interoperability testing with leading hardware and software. This allows integrators to bring complete solutions to market in a timelier manner, accelerating return on investment. Whether integrating into an existing system or as part of a new build, ATTO's ThunderStream 4808 provides faster workflows with built-in protection.

An easy-to-integrate solution, the ThunderStream 4808 was designed specifically for prosumers and professionals who need high-performance customizable RAID storage. ATTO's ThunderStream enables storage integrators to build branded storage products and quickly enter the high-volume Thunderbolt-enabled marketplace. CI Design has created the iT8 Thunderbolt an integrated, unique, lightweight storage solution. This product provides high capacity storage via up to 8 HDDs and is capable of up to 24TB of data. There is also an ability to daisy chain several iT8 Thunderbolt products together creating a scalable capacity of 144TB.

By adding the power of ATTO's ThunderStream 4808, storage integrator customers receive these useful benefits:

- ATTO's solution is time tested, proven and used by top technology companies
  - Proprietary Advanced Data Streaming technology provides controlled acceleration for smooth data streaming and DriveAssure™ technology prevents premature drive failures and slow downs. This gives users smooth, uninterrupted access to data with the highest available performance
  - RAID export functionality allows RAID data previously attached to the ThunderStream to be accessed when drives are connected to ATTO ExpressSAS® RAID products with no reconfiguration necessary
- Integrators can get to market faster with comprehensive design support and an extensive list of interoperable solution components
  - Provides RAID protection with support for levels 0, 1, 5, 6 and 10
  - Support for LTO and LTF5 for tape systems
- Invest in a partnership wisely with the tools to diagnose technical issues and resolve them in a timely manner
  - The ATTO ConfigTool™ allows for customized performance settings and maintenance of RAID Groups
  - Command Line Interface for advanced functionality in environments where a graphical user interface is not available
  - Automatic drive initialization and verification identifies drives with soft errors or performance issues
