## CHALLENGE

With the arrival of new high-resolution video formats including 4K and 8K, there's an increasing need in the Media & Entertainment industry for storage solutions that can easily scale across a network and efficiently adapt to changing post-production workflows. A key requirement in these environments is the ability for multiple editors and digital effects artists to collaborate on shared media files. With multiple streams of content being accessed simultaneously over the network, there's also a need for low-latency, high-bandwidth connectivity to reduce file-transfer bottlenecks.

## SOLUTION

When combined with Dell Compellent FS8600 Scale-out NAS with Fluid File System (FluidFS), ATTO FastFrame™ 10GbE Network Interface Cards (NICs) and ThunderLink® 10GbE Thunderbolt™ devices provide high-performance, low-latency network connectivity for Mac®, Windows® and Linux® clients. ATTO 10GbE solutions simplify networking administration and integrate seamlessly into Dell FluidFS environments, giving FluidFS users the ease of use of a shared network volume as well as high throughput. They also reduce the total cost of ownership by improving connection bandwidth and eliminating redundant network infrastructure components.

## ABOUT ATTO TECHNOLOGY

For nearly 30 years, ATTO Technology, Inc., has been a global leader across the IT and media and entertainment markets, specializing in storage and network connectivity and infrastructure solutions for the most data-intensive computing environments. ATTO works collaboratively with partners to deliver a wide range of end-to-end, customized solutions to better store, manage and deliver big data. With a focus toward markets that require higher performance and with a dedication to working as an extension of customer's design teams, ATTO manufactures host and RAID adapters, network adapters, storage controllers, Thunderbolt-enabled devices, switches and software. ATTO solutions provide a high level of connectivity to all storage interfaces, including Fibre Channel, SAS, SATA, iSCSI, 40/10GbE, FCoE and Thunderbolt™. Distributing its cutting-edge products worldwide through Original Equipment Manufacturers (OEMs), systems integrators, value added resellers (VARs) and authorized resellers, ATTO is the Power Behind the Storage.

FastFrame 10GbE NICs and ThunderLink 10GbE Thunderbolt devices leverage unparalleled performance to meet the performance needs of today's bandwidth-intensive post-production environments. They are ideal for applications that require low-latency, high-bandwidth data transfers, such as data back-up and restoration, video-on-demand and video streaming, medical imaging, and clustered databases. Advanced Data Streaming (ADS™) technology, a proprietary feature found throughout the ATTO product line, manages network latency to provide high-performance media file transfers and reliable playback of streaming media.

The Dell Fluid File System is designed to go beyond the limitations of traditional storage by offering customers a flexible, scale-out architecture that grows non-disruptively as business needs evolve. FluidFS is a fully distributed, clustered file storage solution that supports both high-capacity and performance-intensive workloads. As a core component of the Dell Fluid Data architecture, FluidFS brings differentiated value to the Dell SC Series and PS Series storage platforms.
