

Secure your assets with ATTO and Kensington®

NEW THUNDERLINK® AND THUNDERSTREAM® DEVICES NOW FEATURE UNIVERSAL LOCK SLOT FOR ADDED SECURITY

ABOUT ATTO

For 30 years, ATTO Technology, Inc. has been a global leader across the IT and media & entertainment markets, specializing in storage and network connectivity and infrastructure solutions for the most data-intensive computing environments. ATTO works with partners to deliver end-to-end solutions to better store, manage and deliver data. Working as an extension of customer's design teams, ATTO manufactures host and RAID adapters, network adapters, storage controllers, Thunderbolt™ adapters, and software. ATTO solutions provide a high level of connectivity to all storage interfaces, including Fibre Channel, SAS/SATA, iSCSI, Ethernet, NVMe, NVMe over Fabrics and Thunderbolt. ATTO is the Power Behind the Storage.

Kensington® locks are known for enabling equipment such as laptops and monitors to be locked into place to keep them secure and protected. This familiar lock slot has now made its way to ATTO Technology's ThunderLink® Thunderbolt™ adapters to increase availability of security options.

Portability and low form factor are an important feature for our Thunderbolt adapters. This allows users, for example, to work out in the field on mobile workstations and seamlessly bring work back to an editing suite to connect to shared storage. Our Thunderbolt adapters also have a low form factor, allowing for ease of setup when using in field locations and more room for additional equipment back at home-base.

The benefit of portability can also require an increase in accountability to ensure the adapter is secure and available. Often Thunderbolt adapters are used in environments where multiple people are using the same equipment. Having a device locked into place ensures proper set up and availability of data when equipment is changing hands amongst different users. For example, film schools are using ATTO ThunderLink adapters to handle the data throughput of teaching editing, rendering and color correction. With many people using a single editing bay, the integrators of the Thunderbolt adapters in their workflow seek to secure the units and are able to do so with Kensington locks.

Kensington locks are a simple solution to secure ATTO Thunderbolt adapters. All our Thunderbolt adapters are now equipped with a Kensington lock slot. This easy to access slot will allow connectivity with any Kensington security lock. There are numerous locks available based on need and design. To utilize, simply secure a

Kensington lock to the slot on your ThunderLink adapter and a fixed location. Disconnecting the lock to release the unit is done by simply unlocking and removing the Kensington lock. The slot is also small enough that it will not interfere with daily use, even if the product does not need to be secured.

The combination of ATTO Thunderbolt adapters with Kensington lock slots allow for increased productivity while simultaneously protecting your hardware. When seeking a secure environment and data protection, ATTO Thunderbolt adapters deliver.
