

# ATTO SAS/SATA Cables

## TECHNICAL FEATURES

- Rugged cabling interconnect systems
- Paddle card optimization with impedance matching reduces crosstalk for end-to-end signal integrity and performance
- Adaptive, robust plug interface with EMI gasket and die-cast back shell assure proper EMI shielding
- Robust cable strain relief system isolates cable termination from mechanical stress
- Fully compliant with all SAS and SATA-defined keying options
- Durable, full shielding reduces interference and maintains signal quality
- Optimized specifically for use with all ATTO SAS RAID and host bus adapters and storage controllers
- 90 day standard product warranty

For 30 years, ATTO Technology, Inc., has conducted in-depth testing of noise, interference, cable lengths and their effects on connectivity solutions. ATTO premium cables are specifically designed to optimize connections between high-performance storage, servers and workstations. ATTO cables are recommended for use with all ATTO products to ensure the highest levels of performance and data reliability.

Utilizing high-quality shielding, equipment-specific cable lengths and extensive pull testing to verify connection integrity, these premium cables ensure the best performance and data integrity from your ATTO-enabled infrastructure.

## PURE SIGNAL INTEGRITY

ATTO has been manufacturing storage connectivity products for 30 years, becoming experts in the art of developing clean board design for smooth data streaming. ATTO engineers focus on signal integrity, designing to minimize jitter, crosstalk, reflections and power supply noise, resulting in the cleanest signals in the industry.

This is one of the reasons why ATTO is the most trusted storage connectivity solution provider for high-speed streaming applications. Signal quality is the best indicator of performance and could be the difference between completing projects on time or missing deadlines, or losing critical data. ATTO products can be relied upon for uninterrupted reliable, and high-performance data transfers.

**Substandard Cable Signal:**

*Distorted eye pattern = weaker signal integrity*

*Possible data loss, errors*

**ATTO Cable Signal:**

*Clean eye pattern = tighter signal strength*

*Smooth and reliable data transfers*
