

ATTO vConfigTool v1.10 – VMware®

1. General Release Information

ATTO's vConfigTool™ for VMware vCenter Server is a software plug-in that integrates simplified, centralized management and monitoring for VMware virtual environments. vConfigTool allows IT administrators to accelerate adapter deployments, optimize configurations, improve system availability and reduce the cost of VMware host infrastructures. ATTO's exclusive storage I/O latency diagnostic tool Latency Scout™ enables IT administrators to quickly isolate datacenter bottlenecks with real-time latency histogram ensuring maximum infrastructure uptime and optimal performance.

These product release notes define the new features, changes, known issues and release details that apply to the ATTO vConfigTool v1.10 that was released on April 9th, 2018. This information pertains to the VMware® vCenter 6.5, VMware ESXi 6.5 and VMware ESX 6.5.
