 - **New Features**
 - None
 - **Incident Resolutions/Bug Fixes/Changes**
 - Addressed an issue with a bus hang during data transfer when a write command is issued with a length that is not a multiple of four.
 - Improved power management functionality when multiple host adapters are installed in the same computer.
 - Revert to converting all untagged commands to ordered queue.
 - Modified diagnostic test for an interrupt pending to ensure that interrupts are processed correctly when shared with other PCI devices.
 - All event sources are disabled prior to the driver unloading to prevent a kernel panic when other devices share the same interrupt.
 - Improved out-of-resource processing code
 - Performance improvements for applications that request more than 24 bytes.
 - Improved uninstaller script to function better for non-root users.

3. Known Issues/Advisements

- Power management is disabled for PCI-Express adapters on PPC platforms due to a bug in the PowerMac PCI-Express G5 chipset that causes the system to hang when resuming from sleep.
