Product Release Notes

FastFrame 10GbE NIC & CNA Release v2.10 – Mac® OS X

1. General Release Information

These product release notes define the new features, changes, known issues and release details that apply to the FastFrame Network Interface Card and Converged Network Adapter products v2.10 that was released on 6/21/2012. This information pertains to Mac OS X.

2. Changes

- **Version 2.10 (Released 6/21/2012)**
 - The following apply to driver v2.10
 - **New Features**
 - Resolved a possible crash or hang during Thunderbolt hot plugging.
 - Corrected link speed selection for NT adapters.
 - Network connectivity is maintained when waking from sleep.
 - Enhanced initialization to better deal with fragmented system memory.
 - **Supported OS**
 - Mac OS X 10.6
 - Mac OS X 10.7

- **Version 2.00 (Released 4/23/2012)**
 - The following apply to driver v2.00
 - **New Features**
 - Initial release of Mac OS X drivers for the FastFrame 10GBASE-T Network Interface Card.
 - Added support for the temperature sensor for NT adapters.
 - Several enhancements to report errors and operate correctly in degraded mode.
 - Added support for two new checksum offloads included in OS X Lion, allowing IPv6 checksum calculation to take place in hardware for TCP and UDP. The checksum calculation covers the IPv6 pseudo header, TCP/UDP header and TCP/UDP data on both transmit and receive.
 - Added support for the NT11, and NT12 adapters. Changed link speed selection to account for additional link speeds supported by the Twinville chip.
 - VLAN discovery frames are no longer sent if the feature is disabled.
 - Erroneous data is now properly discarded in the event of a cable pull while reading from a Fibre Channel drive.
 - Features specific to CS adapters are confirmed to be disabled for NS and NT adapters during driver initialization.
 - When the frame size of a link aggregate is changed in System Preferences, connectivity is no longer lost.
 - Receipt of broadcast packets is confirmed to be enabled upon waking from sleep.
 - Fixed the mapping of User Priority to Traffic Class so Priority Flow Control (PFC) works correctly, preventing dropped FCoE packets.
 - Corrected several crashes and hangs that could occur during Thunderbolt hot plugging.
 - **Supported OS**
 - Mac OS X 10.6
 - Mac OS X 10.7

- **Version 1.10 (Released 9/1/2011)**
 - The following apply to driver v1.10
 - **New Features**
 - Initial release of Mac OS X drivers for the FastFrame 10GbE Converged Network Adapters
 - **Supported OS**
 - Mac OS X 10.6
 - Mac OS X 10.7

- **Version 1.00 (Released 7/20/2011)**
 - The following apply to driver v1.00
 - **New Features**
 - Initial release of Mac drivers for the FastFrame 10GbE Network Interface Card
 - **Supported OS**
 - Mac OS X 10.6
 - Mac OS X 10.7

3. Known Issues/Advisements

- The NVRAM option to disable VLAN discovery (a feature specific to CS adapters) is not set by default for NS and NT adapters. This setting is never referenced by NS and NT adapters, so its value does not affect their operation, but it could be confusing for a user that is viewing NVRAM settings using the 'atcnavr' CLI tool.
- Thunderbolt hot plugging is not supported for CS adapters.
- For NT adapters, the only link speed selection that works is auto. If the link speed is set to an explicit value the link will fail to come up.
- A fixed 10Gb/s speed setting is not available in System Preferences. The available choices are auto and 1Gb/s. When auto is selected, the speed will be fixed at 10Gb/s if a capable SFP is inserted. As a result, the IOActiveMedium property in the I/O registry will indicate auto speed instead of 10Gb/s when 10Gb/s is negotiated.
- Using jumbo frames as a replacement for standard frames will allow for full utilization of 10Gb Ethernet.

4. Affected Products

Product Name	SKU
FastFrame NT11	FFRM-NT11-000
FastFrame NT12	FFRM-NT12-000
FastFrame NS11	FFRM-NS11-000
FastFrame NS12	FFRM-NS12-000
FastFrame NS14	FFRM-NS14-000
FastFrame CS11	FFRM-CS11-000
FastFrame CS12	FFRM-CS12-000
FastFrame CS14	FFRM-CS14-000

5. Contacting ATTO Support

ATTO Technology, Inc. is renowned for its technical support services. ATTO's goal is to provide you the quickest response possible for your technical support needs, and is available Monday-Friday, 8:00 AM to 6:00 PM EST (except holidays and plant closings).

ATTO Technical Support can be contacted via phone or email:

- Phone: 716.691.1999 ext. 242
- E-Mail: techsupport@attotech.com
